

# Protection Shield Lotion

Protection Shield™ is a new invention where the lotion creates an invisible barrier between you and any toxic chemical. Research has demonstrated that the popular bug sprays effectively keep misquotes, chiggers, ticks from biting you, but research has also shown the horrific cancer causing affects of DEET. This new lotion will allow you to have the security of mind that you can use a proven bug repellent that should keep those disease infected ticks and mosquitoes from transmitting unwanted bacteria and viruses AND at the same time protect yourself from soaking any of the chemicals into your skin.

This non-greasy, non-plastic-feeling lotion is multi-functional. It contains 14 different moisturizers and emollients that are safe for all skin areas. Once the lotion is on your skin:

1. It creates a barrier to both organic and non-organic irritants for up to five hours, while letting nothing penetrate the skin. This includes most everything from 0 to 14 on the pH scale. In other words, you are able to put your hands in cleaners and other toxic chemicals and The Protection Shield™, will protect you from absorbing unwanted chemicals in your body.
2. It will not come off in your eyes with perspiration or on your clothes.
3. It is designed to let your skin breathe.
4. It maintains the skin's natural moisture.
5. It will help alleviate the pain of raw cracked skin due to constant exposure to the elements. The ingredient APS (a broad spectrum anti-microbial) should protect you from absorbing bacteria and viruses via the skin where the lotion is applied.

Put on Protection Shield Lotion before:

– Off™

-Cleaning or working with toxic chemicals

-Walking or workings in areas with poison ivy or poison oak

-Working in areas with bacteria and viruses

-This natural-feeling lotion provides a shield from any toxic chemical.

With this revolutionary product, you have the freedom to use any bug spray that is known to keep bugs from biting, but no longer do you have to sacrifice protection and health by exposing yourself and your family to toxic chemicals.

Protection Shield Lotion is easy to use and very kid friendly!

**Ingredients:** Deionized Water, Polawax, Cetyl Alcohol, Stearyl Alcohol, Glyceryl Stearate, Diethicone, Cyclomethicon, Propylene Glycol, Methyl Parabe, Propyl Paraben, Imidazolidinyl Urea, Aloe Extract, Benzalkonium Chloride, APS Tocopheryl (Vitamin E), Glycerine, Triethanolamine, Citric Acid, Orange Oil

**Personal Note:** About 16 years ago (about a year before we started Jernigan Nutraceuticals), our clinic kept attracting Lyme patients who had been everywhere and done everything. So out of necessity, we asked God for guidance, and He graciously gave us the Jernigan Lyme protocol, (which is

always a work in process). So, we have a good protocol, but it really bothered me that I kept having to deal with Lyme and West Nile Virus with my own kids and myself. We live in the country and we harvest our own herbs so it was very easy for us to get bitten by mosquitoes, ticks, and chiggers. I am totally against using Off™, but I would either forget my natural bug killing stuff or the natural bug killing stuff did not work on everyone, and Off™ was always available and always worked. What is a Mom to do? I can't stay inside nor do I want the kids to stay inside, and I was tired of having to antidote the kids and myself from getting bit by infected ticks or mosquitoes, so I asked God: "Isn't there some kind of lotion that I could put on the kids that would create a barrier and then I could use the dreaded Off™ and kill two birds with one stone?" So Mark from Ancient Formulas sent me a video and I watched him and his partner put hydrochloric acid on their hands, the acid did not burn their hands, but when they poured the acid on to aluminum foil it would burn the foil. But they did not stop there: they then cleaned their hands with Pumice® soap and applied about 3 other toxic cleaners on their hands and then washed each cleaner off with Pumice® soap, and then they put the acid back onto their hands, and again they showed it did not burn and again they showed how they poured the acid off of their hands onto aluminum foil and you could see the smoke from the chemical reaction. They must have done this sequence about 4 times. I was amazed. But I said, "What does it feel like?" I don't like lotion on my hands, I don't like the smell of most of them and I don't like that plastic feeling. So I tried it and again I was amazed how the feeling of the lotion just disappeared after it dried and it had no odor. I felt very blessed to have found the answer to my question, and I pray that this lotion will also help give you the protection and the peace of mind that it has given me.

**Another Personal Note:** I use it when I work with the 190 proof alcohol to extract the plant material from the plants to form Jernigan Nutraceuticals elixirs. I am so sensitive to the 190 proof alcohol that it would hurt me if I would get even a drop of it on my skin. I had tried everything to keep from getting alcohol on my skin, but nothing worked until I found this product. It was a miracle for me. I also use it when applying essential oils to patients so my body doesn't get bombarded with all these oils that other people's body's needed .

To Your Health,

Dr. Sara Jernigan, BS, DC
